

## CHAPTER EIGHTEEN

# Healthy Dogs & Cats

### PRECAUTIONS

If you are like most pet owners, your pets are very special to you. It is important to you to take the best care of them that you can. If you have not already done so, removing all of the grocery store brand cleaning and personal care products from your home is probably the easiest thing you can do to prolong the good health of your pets. Animals are more sensitive to toxic chemical vapors than we are because they are much lower to the ground where the vapors accumulate.

When using Melaleuca, or any other products, be sure to follow the package directions carefully. When using **T36-C5** or **T40-C3** on your pets, apply a diluted solution to a small area and check for sensitivity for 48 hours. If no reaction occurs, it should be safe. See *Dilution Formulas* below.

*Always consult your veterinarian before starting any course of supplementation or treatment for your pet. Every effort has been made to ensure that the information contained in this book is complete and accurate. However, neither the publisher nor the author is engaged in rendering professional advice or services to the individual reader. The ideas, procedures and suggestions contained in this book are not intended as a substitute for consulting with your veterinarian. Neither the author nor the publisher shall be liable for any loss, injury, or damage allegedly arising from any information or suggestion in this book.*

### GENERAL INFORMATION

The hair and skin of most animals should not be overly washed with harsh detergents or shampoos. Cats and dogs can develop sensitivity and produce dry skin as a result of overwashing. Preventive care during seasonal infestation with fleas, ticks, mites and other insects can be accomplished by proper nutritional support to the animal. Dogs appear to have a particularly high requirement for extra calcium and magnesium. Cats appear to require additional B-complex, often in the form of brewers yeast. Dogs appear to fare very well when treated with **Sol-U-Mel**, **Renew Bath Oil**, and diluted **T36-C5**. Cats are more sensitive, and should not be treated with these products without consulting a veterinarian first. Optimum nutritional support should be provided based on the individual animal. Your natural veterinarian should be consulted if you are uncertain as to what your pet may need.

\*See the precautions at the beginning of this chapter.
